

Polar/IMAGE Study of Auroral Conjugacy featured at Fall AGU Mtg. Press Conference

- Polar and IMAGE mission coordination permitted unprecedented full simultaneous view of boreal and austral auroras during storm conditions.
- Conjugacy of features shows that the storm aurora is produced internal to the magnetosphere and not by direct solar wind entry (would be anti-conjugate).
- Presenting Panel: P. Reiff/Rice U, J. Sigwarth/U Iowa, H. Frey/UC Berkeley
